Advanced therapies and technologies, new service delivery methods, and care upgrades in underserved areas are translating into improved quality of life for millions with disabilities. Occupational therapy parallels this progress at the individual level, balancing short-term recovery and adaptation with long-term independence and well-being. This Second Edition of the International Handbook of Occupational Therapy Interventions builds on its ground-breaking predecessor by modelling current clinical standards rooted in scientific evidence-based practice. Its interventions are applied to a diverse range of client disabilities, with many new or rewritten chapters on workplace and vehicle accommodations, smart home technologies, end-of-life planning, and other salient topics. New introductory chapters spotlight core competencies in the field, from assessing client needs and choosing appropriate interventions to evaluating programs and weighing priorities. And for increased educational value, interactive case studies allow readers an extra avenue for honing clinical reasoning and decision-making skills. Of particular note is a new chapter providing a taxonomy—the Occupational Therapy Intervention Framework—and a validation study of its categories and concepts, delineating the occupational therapist's roles and the expected outcomes. Intervention areas featured in the Handbook include: ? Adaptive interventions, OTs manage and facilitate clients' adaptations. ? Learning interventions, OTs teach and the clients learn or relearn. ? Enabling interventions, OTs enable clients to be meaningfully occupied. ? Preventing interventions, OTs prevent ill-health and promote clients' ability to sustain health in daily life. The Second Edition of the International Handbook of Occupational Therapy Interventions is career-affirming reading for all members of rehabilitation teams, including occupational and physical therapists and rehabilitation nurses. Students intending to enter this growing field and professionals working toward its continued improvement will find it useful and inspiring.

An Illustrated Guide to Furniture History provides upper-level students and instructors with an alternative visual analytical approach to learning about furniture history from Antiquity to Postmodernism. Following an immersive teaching model, it presents a Nine-Step Methodology to help students strengthen their visual literacy and quickly acquire subject area knowledge. Moving chronologically through key periods in furniture history and interior design, such as the Renaissance, the Arts and Crafts Movement, and Modernism, it traverses Europe to America to present a comprehensive foundational guide to the history of furniture design. Part I addresses furniture within the context of the built environment, with chapters exploring the historical perspective, construction principles, and the categorization of furniture. In Part
II, the author visually depicts the structural organization of the methodological process, a three-category framework: History, Aesthetics, and Visual Notes. The chapters in this part prepare the reader for the visual analysis that will occur in the final section of the book. The book is lavishly illustrated in full color with over 300 images to reinforce visual learning and notation. A must-have reference and study guide for students in industrial and product design, interior design, and architecture.

Manufacturers' Instructions for Child Safety Seats

This useful resource is designed to offer healthcare professionals specific information about the diverse area of assistive technology. It covers the variety of technology available and explains the adaptations of the technology, as well as how different devices work together. The first section provides the fundamentals of assistive technology, discussing issues such as life span considerations, environmental context, and funding and public policy. The next section delves into topics especially relevant for patient care, including computer access and alternative communication. Sections on manipulation, ambulation, and locomotion technologies are discussed next, concentrating on devices that assist with upper and lower body function. This text ends with a discussion of technologies for environments in the real world. Diversity of technology areas – covers all major areas and facets of assistive technology, including how the varied technologies can be used in conjunction to improve the ease of activities of daily living for the user. Organization of text – by grouping assistive technology into four major areas, the book is able to easily lead the reader to both the general area and the specific information they are looking for. Level of presentation – makes the text useful for both allied health professionals, their support personnel, and even the consumer looking for guidance in the area of assistive technology. Outstanding group of authors, section editors and contributors representing the country's major programs and each area of assistive technology – provides accurate, up-to-date information for the reader.

Combining 25 years of clinical, research and teaching experience, Dr Lisa Harvey provides an innovative 5-step approach to the physiotherapy management of people with spinal cord injury. Based on the International Classification of Functioning, this approach emphasises the importance of setting goals which are purposeful and meaningful to the patient. These goals are related to performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters: training motor tasks strength training contracture management pain management respiratory management cardiovascular fitness training.

Dr Harvey develops readers' problem-solving skills equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as: transfers and bed mobility of people wheelchair mobility hand function for people with tetraplegia standing and walking with lower limb paralysis. This book is for students and junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians, including those keen to explore the evidence base that supports different physiotherapy interventions.
